

How Tobacco Smoke Causes Disease: The Biology and Behavioral Basis for Smoking-Attributable Disease

Chapter 1. Introduction, Evaluation of Evidence on Mechanisms of Disease Production, and Summary 1

Introduction	3
Evaluation of Evidence on Mechanisms of Disease Production	5
Mechanisms of Action: Necessary, Sufficient, or Neither	7
Description of Evidence on Mechanisms of Disease Production	8
Scientific Basis of the Report	8
Development of the Report	8
Major Conclusions	9
Chapter Conclusions	9
References	12

Chapter 2. The Changing Cigarette 13

Introduction	15
Cigarette Design Changes over the Years	15
New Cigarette Products	17
Low-Nicotine Cigarettes	18
Cigarette-Like Products	18
Evaluation of New Cigarette Products	19
New Oversight of Tobacco Products	20
Summary	20
Conclusions	21
References	22

Chapter 3. Chemistry and Toxicology of Cigarette Smoke and Biomarkers of Exposure and Harm 27

Introduction	29
Chemistry	30
Biomarkers	51
Summary	77
Conclusions	79
References	80

Chapter 4. Nicotine Addiction: Past and Present 103

Introduction	105
Definition of Nicotine Addiction	105
Tobacco Constituents and Pharmacokinetics	111
Components of Nicotine Addiction	116
Pathophysiology of Nicotine Addiction	124
Genetics	137
Prevalence and Trajectory Toward Nicotine Dependence	156
Epidemiology of Tobacco Use and Nicotine Dependence in Adults	162
Trajectory of Recovery or Relapse	170

Evidence Summary 180
Conclusions 183
References 184

Chapter 5. Cancer 221

Introduction 225
Carcinogen Exposure, Metabolism, and DNA Adducts 227
DNA Repair and Conversion of Adducts to Mutations 252
Gene Mutations in Tobacco-Induced Cancer 274
Loss of Mechanisms for Growth Control 284
Other Aspects 296
Evidence Summary 302
Conclusions 304
References 305

Chapter 6. Cardiovascular Diseases 351

Introduction 355
Tobacco Use and Cardiovascular Disease 355
Secondhand Tobacco Smoke and Cardiovascular Disease 363
Pathophysiology 363
Hemodynamic Effects 368
Smoking and the Endothelium 370
Thrombogenic Effects 374
Inflammation 382
Smoking and Diabetes 383
Lipid Abnormalities 387
Cardiovascular Biomarkers 391
Smoking Cessation and Cardiovascular Disease 394
Methods to Reduce Exposure 402
Evidence Summary 407
Conclusions 408
References 409

Chapter 7. Pulmonary Diseases 435

Introduction 437
Smoking and Respiratory Defense Mechanisms 450
Oxidative Stress 457
Oxidative Stress in Chronic Obstructive Pulmonary Disease 471
Genetics of Pulmonary Disease and Susceptibility to Tobacco Smoke 475
Pathogenesis of Emphysema 487
Summary 494
Evidence Summary 494
Conclusions 496
Implications 496
References 497

Chapter 8. Reproductive and Developmental Effects 521

Introduction 523

Review of Epidemiologic Literature on Smoking	524
Pathophysiological and Cellular and Molecular Mechanisms of Smoking	555
Implications	606
Evidence Summary	608
Conclusions	612
References	613
Chapter 9. A Vision for the Future	645
The Global Tobacco Epidemic	647
Reducing the Risks from Smoking	651
Ending the Tobacco Epidemic	652
Concluding Remarks	654
Appendix 9.1: Recommendations for Future Research	655
Appendix 9.2: <i>Ending the Tobacco Problem: A Blueprint for the Nation</i>	660
Appendix 9.3: Promoting Healthy Lifestyles: Policy, Program, and Personal Recommendations for Reducing Cancer Risk	664
References	667
List of Abbreviations	671
List of Tables and Figures	675
Definitions and Alternative Nomenclature of Genetic Symbols Used in This Report	679
Index	689
